

Puerto Rico CJIS

#SEARCH

Puerto Rico current message switch is handled by DATAMAX. Currently the RCI system does not integrate with DATAMAX Switch

RCI provide various interfaces with local agencies to aggregate and also dispatch information to other satellite systems. The local interfaces integration are :

- **DTOP (DMV)** : DTOP is accessed by both RCI and the DATAMAX switch.
- **PR Firearm registration System**: used locally to register all firearms
- **SUMAC** : This is a system used by the judicial branch. With this integration the RCI system tracks the case as it goes through all its process.
- **Registro Demográfico**: RD is the system used locally to register all the events like birth, death, marriages, etc.
- **Puerto Rico Police Department (PRPD)**
